Determination of maximum span between pipe supports using maximum bending stress theory.

Determination of maximum span between pipe - Piping

This 5-day, intermediate level course for engineers and piping system designers reviews the key areas associated with the design of piping systems for oil and gas facilities.

Release Sources. Identifying the specific portion of the tank or tank system that has caused a subsurface release is a critical first step. Common vulnerable areas include the bottoms of USTs (particularly underneath the manhole where gauging sticks are or were formerly used), associated piping, UST fill manholes, dispensing pumps, and areas known likely to have installation issues.

Operations research, or operational research in British usage, is a discipline that deals with the application of advanced analytical methods to help make better decisions. Further, the term 'operational analysis' is used in the British (and some British Commonwealth) military as an intrinsic part of capability development, management and assurance.
