The Cell Counting Kit-8 is a colorimetric assay kit used to measure cell proliferation and cytotoxicity. It is a ready-to-use solution that does not require radioisotopes and correlates with the [3 H]-thymidine incorporation assay. It can be added directly to the cell media for fast, high-throughput screening without a solubilization process obtaining highly reproducible and accurate results.

Food technology is a branch of food science that deals with the production processes that make foods.. Early scientific research into food technology concentrated on food preservation. Nicolas Appert's development in 1810 of the canning process was a decisive event. The process was not called canning then and Appert did not really know the principle on which his process worked, but canning ...

CYTO-ID [®] Autophagy Detection Kit measures autophagic vacuoles and monitors autophagic flux in lysosomally inhibited live cells using a novel dye that selectively labels accumulated autophagic vacuoles. The dye has been optimized through the identification of titratable functional moieties that allow for minimal staining of lysosomes while exhibiting bright fluorescence upon incorporation ...
