FE Review Manual: Rapid Preparation for the Fundamentals

Deformation in continuum mechanics is the transformation of a body from a reference configuration to a current configuration. A configuration is a set containing the positions of all particles of the body. A deformation may be caused by external loads, body forces (such as gravity or electromagnetic forces), or changes in temperature, moisture content, or chemical reactions, etc.

Fundamentals of Engineering Exam - tamuk.edu

In continuum mechanics, stress is a physical quantity that expresses the internal forces that neighbouring particles of a continuous material exert on each other, while strain is the measure of the deformation of the material. For example, when a solid vertical bar is supporting an overhead weight, each particle in the bar pushes on the particles immediately below it.

Stress (mechanics) - Wikipedia

Stress is the force per unit area on a body that tends to cause it to change shape.. Stress is a measure of the internal forces in a body between its particles. These internal forces are a reaction to the external forces applied on the body that cause it to separate, compress or slide. External forces are either surface forces or body forces. Stress is the average force per unit area that a ...

Civil Engineering FE Exam Preparation Workbook contains over 600 problems designed to reinforce your understanding of civil engineering concepts and equations found in the NCEES FE Reference Handbook. Like the actual exam, problems are grouped by topic and are multiple-choice. Solutions are provided for all problems so you can review problem-solving methods.
