6 Chapter 1 Vector Analysis Exercises 1.1.1 Show how to find A and B , given $A + B$ and $A \cdot B$. 1.1.2 The vector A whose magnitude is 1.732 units makes equal angles with the coordinate axes. Find A_x, A_y , and A_z . 1.1.3 Calculate the components of a unit vector that lies in the xy -plane and makes equal angles with the positive directions of the x - and ...

Introduction to vector and tensor analysis

Description : An Introduction to Vector Analysis is designed for a one semester or one quarter course in vector analysis (sometimes called vector calculus) for undergraduates majoring in one of the sciences, engineering, or mathematics. The prerequisite is the usual calculus sequence taught in most universities in the United States.

Vector Analysis A.1 Vectors A.1.1 Introduction Some physical quantities like the mass or the temperature at some point only have magnitude. We can represent these quantities by number alone (with the appropriate units) and so we call them scalars. There are other physical quantities that have magnitude and direction.

Vector: Let i be a unit vector pointing east, j be a unit vector pointing north, and k be a unit vector pointing up. (N.B.: Unit vectors are non-denominate, have a magnitude of unity, and are used only to specify a direction.) Then the total vector, in terms of its scalar components and the unit vectors, can be written as $V = a_i + b_j + c_k$.
