Formal definition. If we denote by  $SPACE(t(n))$ , the set of all problems that can be solved by Turing machines using  $O(t(n))$  space for some function  $t$  of the input size  $n$ , then we can define PSPACE formally as  $\hat{P} = \bigcup_{f \in \Omega(n)} SPACE(f(n))$ . PSPACE is a strict superset of the set of context-sensitive languages.. It turns out that allowing the Turing machine to be nondeterministic does not add any extra power.

A finite-state machine (FSM) or finite-state automaton (FSA, plural: automata), finite automaton, or simply a state machine, is a mathematical model of computation. It is an abstract machine that can be in exactly one of a finite number of states at any given time. The FSM can change from one state to another in response to some external inputs; the change from one state to another is called a ...

Basis van het probleem. Een wiskundige functie is berekenbaar als er een automatische procedure bestaat die voor elk willekeurig element van het domein (bijvoorbeeld een getal) de functiewaarde ervan bepaalt. Dit blijkt voor lang niet alle functies het geval. Een wiskundige verzameling is beslisbaar als er een automatische procedure bestaat die voor elk willekeurig mogelijk element bepaalt of ...
